

The image shows a vast industrial facility, likely an aluminum smelter. A long, straight aisle runs through the center, flanked on the right by a series of large, complex machines. These machines have vertical columns and horizontal pipes, and they appear to be part of a continuous production line. The floor is a light-colored, dusty concrete. In the distance, two workers in dark clothing and hard hats are walking away from the camera. The ceiling is high, with a series of industrial lights hanging from it. The overall atmosphere is one of a busy, large-scale manufacturing environment.

SUCCESSFUL THROUGH INNOVATIONS ON GLOBAL MARKETS MEDIUM-SIZED BUSINESSES IN GERMANY CONTRIBUTE SOLUTIONS THAT STIMULATE LOCAL CONDITIONS

Aiming high is part of human nature. As a sign of this effort, high-rise buildings reach up into the sky. The high-rise boom continues unabated, with projects on the Arabian Peninsula and in East Asia overshadowing those of the former trailblazer, New York City. Towers that are more than a thousand meters high are currently being planned. Such buildings must withstand loads that are highly different than those placed on a terraced house in the German provinces. And yet it is precisely here, in the German provinces, that high-tech facades are being developed to safeguard skyscrapers around the globe against storms. The global leader in facade components for high-rise buildings is a medium-sized company based in Swabia.

But it is not only progress towards the sky that poses great challenges to technology. The development of traffic routes and power networks forces us to pave trajectories under the earth. Here, as well, products and expertise from Germany set the tone. The world's leading supplier of tunneling technology is a German family-run enterprise.

Regardless of whether extreme heights or impenetrable depths are involved – SMEs from Germany are ahead of the global competition in both market segments. These segments consist of a broad spectrum of businesses. They are full of examples of how family-run companies from Germany are leading the way in their respective global markets. Many of them are virtually unknown outside their industry. As different as their products and application areas are, these “hidden champions” from Germany have one attribute in common. They have big ideas, are implementing them and ensuring that they are marketable. Medium-sized businesses invested more than eight billion euros in research and development in 2012 alone, according to estimates of the Association for the Promotion of German Science and Humanities. As innovation drivers, medium-sized industrial enterprises not only safeguard their market position, but also the long-term survival of their production locations.

A changing energy supply in Germany is having a significant impact on local and competitive conditions. This is particularly true for energy-intensive companies of the primary aluminum industry. Given the enormous challenges, it is a dubious option to wait for solutions from the command center of the politically decided turnaround in the German energy industry („Energiewende“). That is why ideas and commitment are needed from those who want to operate profitably here in the future.

The proportion of wind and solar systems in our power supply is increasing. Thus far, however, Germany has lacked storage solutions that can change fluctuating production levels into consistent amounts of electricity.

THE INDUSTRY KEEPS THE POWER GRID STABLE

To produce aluminum, TRIMET needs electricity at a constant volume around the clock. This continuously high energy requirement enables the operation of base load power stations, thereby keeping the power grid stable for private and commercial consumers. Because TRIMET industrial plants are continually connected to the grid, they can always source power from wind and solar power stations. Without base load recipients like TRIMET, green energy facilities would have to be regularly switched off at night and on weekends.

“In the energy-intensive aluminum industry, the ‘virtual battery’ is a new and promising approach that carries a considerable degree of additional potential as compared to today’s existing storage capacities. Nevertheless, many similar innovations will be necessary to reach the required storage potential in the double-digit TWH range.”

Werner Ressing

Head of the Department for Industrial Policy, Federal Ministry of Economics and Technology

The percentage of wind and solar power stations contributing to our electricity supply is growing rapidly. This is the goal of the „Energiewende“. However, this also increases the fluctuating volume of production being fed into the power grid. When the sun shines and there is a strong wind blowing, there is a lot of power; when there is no wind and darkness, little is produced. To transform these

ups and downs into uniform and adequate quantities of electricity for households and industry, energy storage facilities are needed. Without them, expanding production facilities for renewable energies will not be feasible. Practical storage solutions, however, are not yet in sight.

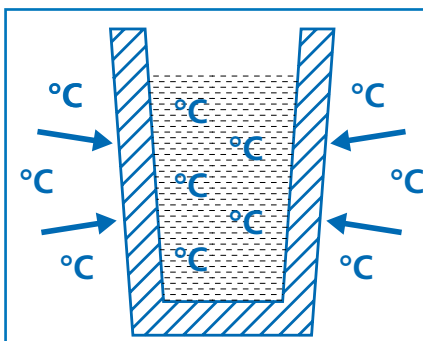

HARMONISING INDUSTRIAL PRODUCTION AND THE FUTURE POWER SUPPLY

But cost-effective solutions are possible. The supply-driven use of available energy through flexible industrial production processes not only contributes to solving a central challenge of the energy turnaround, but also boosts innovation in domestic industrial production, thereby creating economic benefits. With more flexible production, companies can adapt to a fluctuating energy supply – which is the nature of wind and solar power. Energy-intensive, base load-oriented industrial processes can take a leading role in this development. They can make a significant contribution to a stable energy supply; using energy would be more efficient than currently appears possible with other storage solutions. A major opportunity lies in the combination of classic energy production and renewable energies through the joint efforts of industry.

TRIMET Aluminium SE is developing a process that can turn electrolytic furnaces for the production of primary aluminum in collaboration with conventional power plants into energy storage reservoirs for renewable energy. Aluminum has a high energy density. This makes its production energy-intensive and aluminum smelters recipients of base-load electricity. Excess energy is stored in the light metal. The principle behind the new process is the grid-commutated operation of the production equipment. To ensure this, the electrolysis cells are modified so that their output can be increased or reduced for several hours, as needed. The operating point is selected in such a way that the output can be raised or lowered by more than 25 percent for hours. This makes it possible to provide enormous storage capacity. Using this method, TRIMET aluminum smelters could provide outputs of

“The integration of fluctuating levels of power generated from wind and solar plants is one of the greatest challenges of the energy turnaround. However, the massive expansion of storage systems alone will not solve the problem in the foreseeable future. What is needed is the intelligent networking of production, transport, storage, and demand for electrical power. The industry will play a crucial role in this process. After all, it uses 75 percent of the electricity in Germany. TRIMET is making an important contribution by improving the flexibility of its energy-intensive aluminum production.”

Stephan Kohler
Chairman of the Board
of the German Energy Agency (dena)

The “virtual battery” relies on the improved flexibility of aluminum electrolysis. With this method, TRIMET is revolutionizing the basic principle of a manufacturing process that has existed for more than 120 years. An electrolytic furnace is similar to a water container whose walls are made of ice. To ensure that the tank does not melt, the ambient temperature must be kept very low. But it must not reach a temperature that is too cold, or the water in the tank will freeze. Similarly, the temperature of the electrolytic furnace must be harmonized in order to stabilize the furnace walls under fluctuating power supply levels. The process developed by TRIMET regulates this balance through the clever use of exhaust heat, a form of thermal insulation that can be adjusted in an innovative way.

up to 130 megawatts with future capacities of up to 6,000 megawatt hours. This corresponds to the daily energy consumption of two million people.

Interested listener: Federal Minister for the Environment, Nature Conservation, and Nuclear Safety Peter Altmaier (left) gained information at TRIMET on the innovative process that turns aluminum electrolysis into a "virtual battery."

The process offers significant advantages over other storage systems. At 85 percent, the efficiency factor of the aluminum storage reservoir approaches that of pump storage reservoirs, far higher than those of compressed-air or hydrogen storage reservoirs. What's more, the system does not require new power lines, since it is integrated into the existing high-voltage grid.

"In TRIMET's production, the virtual battery is an outstanding example of how energy-intensive industries can constructively handle the new problems of the energy turnaround. It shows that taking the overall system into account is far superior to simple solutions that only consider the production side."

Johannes Lackmann

Wind energy producer and former Managing Director of the German Renewable Energy Federation BEE

More flexible industrial production can provide the basis for harmonizing industrial demand and the future energy supply. This makes a significant contribution to safeguarding competitiveness in a country that is making an unprecedented and radical change in energy policy. The „Energiewende“ will only become a model and therefore exportable if this safeguard is achieved. And exportability, in turn, will determine the success of the „Energiewende“.

CHRONICLE 2012/13

When looking back at the past financial year, we must of course include the highlights that often had an effect on the company long after they had finished.

Let us look back at investments and new products as well as at social and societal activities that accompanied our commercial success during the reporting period.

					
JULY 2012	AUGUST 2012	SEPTEMBER 2012	OCTOBER 2012	NOVEMBER 2012	DECEMBER 2012
<p>30.07.2012 TÜV NORD CERT GmbH approves the integrated management system at the Gelsenkirchen plant in accordance with DIN EN ISO 14001 and DIN EN ISO 50001 (environmental and energy management systems). The quality standards of the Gelsenkirchen plant are recertified in accordance with DIN EN ISO 9001.</p>	<p>08.08.2012 During a plant tour in Harzgerode, Michael Richter, State Secretary of the Ministry of Science and Economic Affairs of Saxony-Anhalt, gains information about TRIMET's high-growth business segment in the automotive sector.</p> <p>08.08.2012 Garrelt Duin, the North Rhine-Westphalian Minister of Economic Affairs, and Rolf Hempelmann, Bundestag member from Essen, visit TRIMET Aluminium AG in Essen and discuss the overall political situation and the resulting challenges for NRW.</p>	<p>06.09.2012 At the 100th anniversary of the GDMB Society of Metallurgists and Miners in Goslar, Kurt Ehrke, former member of the TRIMET Management Board, is awarded the Georg Agricola Medal, the most prestigious award in the German mining and metallurgy industry.</p> <p>11.09.2012 The North Rhine-Westphalian CDU Chairman Armin Laschet visits TRIMET Aluminium AG in Essen and discusses the challenges of industrial production with the Management Board in light of the current energy policy.</p>	<p>9.–10. Oktober 2012 At the world's largest industry exhibition, ALUMINIUM 2012, the TRIMET stand is a central meeting point for the aluminum sector and provides information on the latest developments about the material of the future.</p> <p>26.10.2012 During the "Long Night of Industry Rhine-Ruhr," TRIMET offers interested visitors the opportunity to see the company and its production facilities up close. A prominent guest this year is NRW Minister of Economic Affairs, Garrelt Duin.</p> <p>26.10.2012 TRIMET launches the operation of a new casting cell in its Sommerda plant to meet the growing demand for lightweight components used in automatic transmissions. The investment in the new system amounts to 1.5 million Euros.</p>	<p>Early November 2012 25 years ago, TRIMET Italia S.R.L., the company's first foreign office, was founded in Turin, laying the foundation for successful entry into the Italian and Spanish markets.</p> <p>27.11.2012 The Gelsenkirchen location receives the quality certificate ISO/TS 16949:2009. The quality management standard is oriented on the technical specifications of the automotive industry.</p>	<p>24.12.2012 TRIMET foregoes Christmas gifts and instead supports social health care facilities with donations. The University Hospital in Düsseldorf, the outpatient children's hospice Familienhafen e.V. in Hamburg as well as various projects in Essen and Harzgerode all receive financial support.</p>

JANUARY 2013

28.01.2013

Students at the Private University of Applied Sciences Göttingen and Leibniz University Hanover visit TRIMET production plants in Hamburg and Harzgerode. While a tour of the aluminum smelter was conducted in Hamburg, in Harzgerode the students visited the smelting and recycling works as well as the die-casting and gravity die-casting foundries.

31.01.2013

The official apprenticeship completion for foundry mechanics and toolmakers takes place in Harzgerode. The apprentices reach successful completion of their training period after having trained for 3.5 years. All the graduates will be taken on by TRIMET.

FEBRUARY 2013

04.02.2013

TRIMET welcomes Peter Altmaier, Federal Minister for the Environment, Nature Conservation, and Nuclear Safety, at the Essen location. During a plant tour, the minister gains information on the aluminum production and current developments involving the versatile material. The "virtual battery" is also explained to him.

12.02.2013

An exhibition on work safety in the Essen foundry illustrates the importance of occupational health and safety in the company. On the basis of presentations and films as well as numerous exhibits and images, hazardous situations are presented in a tangible way.

26.02.2013

85 schoolchildren visit the TRIMET plant in Essen. As part of the Initiativkreis Ruhr's event series "Youth Dialogue," the company invites the children on-site for exciting insights into the work of an industrial company.

MARCH 2013

06.03.2013

Another 115 schoolchildren visit the TRIMET plant in Essen as part of the "Youth Dialogue" event series. Supervisory Board Chairman Heinz-Peter Schlüter conducts a question-and-answer session with the children.

12.03.2013

TRIMET CEO Dr. Martin Iffert appears on a Phoenix TV political talk show. Current electricity and energy prices are discussed on the program Phoenix-Runde.

APRIL 2013

14.04.2013

In the Essen electrolysis plant, production is currently in full swing. With furnace 3094, all 360 furnaces are now in operation. CEO Dr. Martin Iffert thanks all the employees who have made this full production possible.

17.04.2013

TRIMET ALUMINIUM AG converts its legal form to an SE (Societas Europaea). As a public European company, the legal structure is obtained in order to continue balancing the ownership and staff interests in the future as well.

28.04.2013

On the occasion of the tenth Metro Group Marathon, Düsseldorf's Fritz-Wüst-Strasse organizes a street fair for a good cause on the "Aluminum Mile." This year's marathon anniversary takes in a record 10,000 Euros. The proceeds are donated to Aktion Lichtblicke.

MAY 2013

22.05.2013

The French Minister of Industrial Renewal Arnaud Montebourg visits the Essen plant to gain information on aluminum electrolysis production processes. TRIMET conducts talks about a possible takeover of two aluminum plants in France.

22.05.2013

On the occasion of "Technology Day" in Harzgerode, TRIMET invites schoolchildren and young people from the region to gain insights into possible vocational fields in the metal and electrical industry.

JUNE 2013

17.06.2013

In the Essen foundry, the seven-millionth ton of aluminum in the plant's history is cast. The anniversary aluminum is delivered in the form of highly specialized rolling ingot to the long-standing customer Constellium Singen GmbH.
